NEW! DECT SYSTEM

Enhance your guests' experience and increase safety and security

Best service from the best DECT system.

Connect to all your alarms with one stylish, robust and secure handset that displays critical and incident alerts graphically on a large colour screen.

CST's DECT Systems - for Hospitality

Colour-coded graphics improve management

This DECT handset has easy access buttons and a large, clear screen that can display an informative status list.

Alarms and messages are prioritised and sorted by importance and colour, with the most urgent alarm at the top, giving a clear, quickly understood view of the whole environment and enabling appropriate action.

Wireless communication

Especially made to suit busy and flexible hospitality users. Communicate with colleagues and external callers, receive alarms and messages directly to your handsets.

Increased security

The handsets can be supplied with precise positioning. Knowing the location of staff increases the safety and security of staff working alone, late or overnight.

Robust and drop tested

The handsets are extremely robust, they have a durable design with a rubberised exterior for optimal grip, they are water and dust resistant in compliance with the IP65 classification.

Function key

On the right side is an extra function key that can be used to dial a preprogrammed number. The key is easy to access if you cannot use the keypad for any reason.

Integration

Handsets can be integrated with fire, building and machine alarm systems. Multifunctionality leads to better efficiency and more capable staff - you'll save both time and money.

Easy to use

Thanks to its large colour display and easily accessible buttons. Alarms and messages are displayed with graphics, providing a clear and quickly understood screen view.

2.5mm headset jack

Large colour display

Built-in vibration
