How Genesis™ Solutions can HELP you & your business?

Genesis™: the complete, cost effective, integrated communication's solution:

- Enhanced communications
- Improved staff and customer safety
- Increased control

Stay Connected

Effective cordless communications deliver a more effective business

Genesis™ enables your staff to stay in touch wherever they are and whatever they are doing, regardless of what communications device they carry. When work patterns or requirements change, Genesis™ has the flexibility to match. Whether it's one-to-one, group messaging, conference calls or lone-worker protection, the system delivers the most feature-rich solution on the market.

Genesis™ portfolio of communication devices include a range of cordless handsets and pagers to meet your needs of voice, data or alarms.

Genesis offers an integrated cordless commutation solution linking PBX systems, Building Alarms and Alarm Location.

Effective, fast communications enable staff to respond more quickly, making your organisation more efficient and productive.

Stay Safe

A new level of protection for your staff, your customers and your organisation

Protecting staff and clients are key issues for every organisation. By integrating all alarms into one system, and ensuring that staff can always be in contact, Genesis takes staff and client protection to a new level. For example, Genesis™ can automatically alert relevant staff to emergencies, such as fire or mechanical breakdown, and warn security personnel about issues such as unauthorised access.

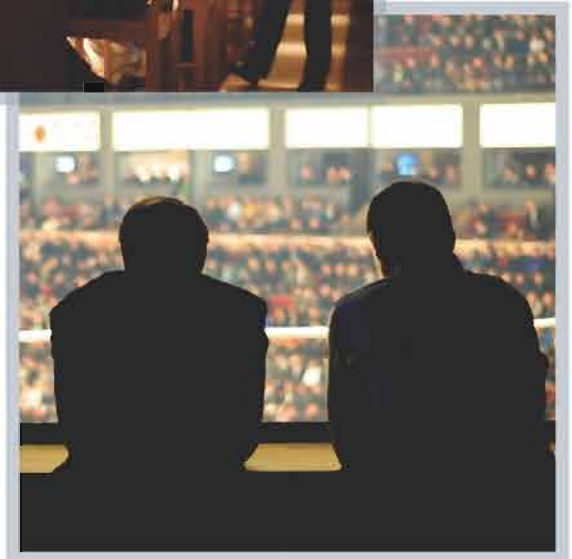

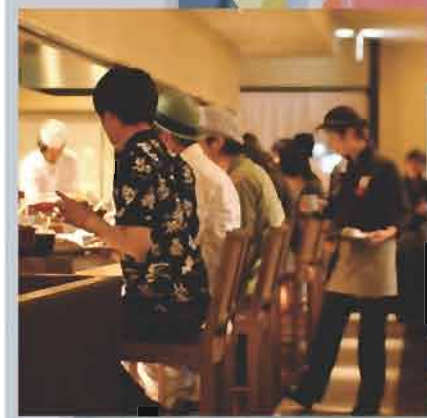

Genesis™ also protects lone workers, night workers and those in hazardous environments. It can integrate with personal alarms, offer position location and alert monitoring staff in case of emergencies such as assault or non-movement. By delivering an extra level of protection, Genesis™ gives at-risk staff the confidence to do their job effectively.

Stay in Control

Seamless, integrated communications that keep you in control of your organisation

Genesis™ manages messaging from your equipment, controls and staff. As systems become more sophisticated, the data they supply needs constant monitoring. Genesis™ will monitor all types of equipment and processes – alarms, safety, security, controls, environment – and will automatically contact relevant staff, on a 'need to know' basis, the instant they are required. For example, if a refrigerator overheats, Genesis™ sends a message to pagers, handsets or mobiles carried by maintenance staff.

Genesis™ automates many facilities management 'mission critical' tasks. Regular reminders can be scheduled automatically too. It creates a log of all traffic so management can see exactly what messages have been sent and the response times. Its wireless technology is compatible with all leading control and data transfer systems, integrating seamlessly with a huge range of third party products.

The complete, cost effective, integrated communications solution

CST & Solutions

Genesis™ Software Messaging

Genesis™ is a PC based alphanumeric paging system compatible with all Windows® based operating systems. It allows users to send messages to on-site pagers, DECT handsets, private mobile phones and from any PC on your network. The Genesis™ system can support over 30,000 Contacts and Groups with a high level of security and reliability. Extensively used in hospitality and industrial applications, Genesis will also allow you to interface to any third party device you have onsite, giving you a total communication solution.

Genesis™ Paging

Advanced Alphanumeric Paging

Our pagers offer instant, reliable communication across a wide range of sectors and Industries from Hospitality to Healthcare. If instant messaging is vital to your business, we have the solution to suit your operations and budget. We can offer pagers to interface with doors, alarms and other systems employed within your business. Messages are sent instantly and discreetly to groups or individuals.

DECT & IP DECT

Extensively used in the Hospitality industry, Genesis™ DECT has proven to be of benefit to many other sectors Including Retail, Industrial, Education, Logistics and Healthcare. This highly effective system brings together the functionality of text and data messaging, full two-way speech communication and mobile telephony into one integrated communication platform. With the added benefit of FREE internal calls and the ability to make and receive external calls, the versatility and reliability of DECT technology makes it ideal for use in any environment.

Loneworker & Staff Attack

With the superior range and reliability offered by CST's Wireless pendants, there is no limit to the applications that can benefit from these products. Worn on a necklace, belt clip, wristband, or mounted in a fixed location, these pendants can be adapted to a wide range of installations. Water-resistant models are also available. They are available with single- or double-button activation with alarm location.

Genesis™ GSM

Genesis™ GSM enables the creation of an effective private and secure GSM Mobile Phone Network which can be used as an alternative to the National Mobile Networks, on-site on-site telephony and Standard DECT applications. Genesis™ GSM enables mobile phones to become an extension of the company's PBX when used on-site, with no call costs. Genesis™ GSM, mobile phones can be used to make outgoing calls for the same cost as calling from an internal telephone extension. Staff can call colleagues between sites over the corporate IP network without incurring any call costs.

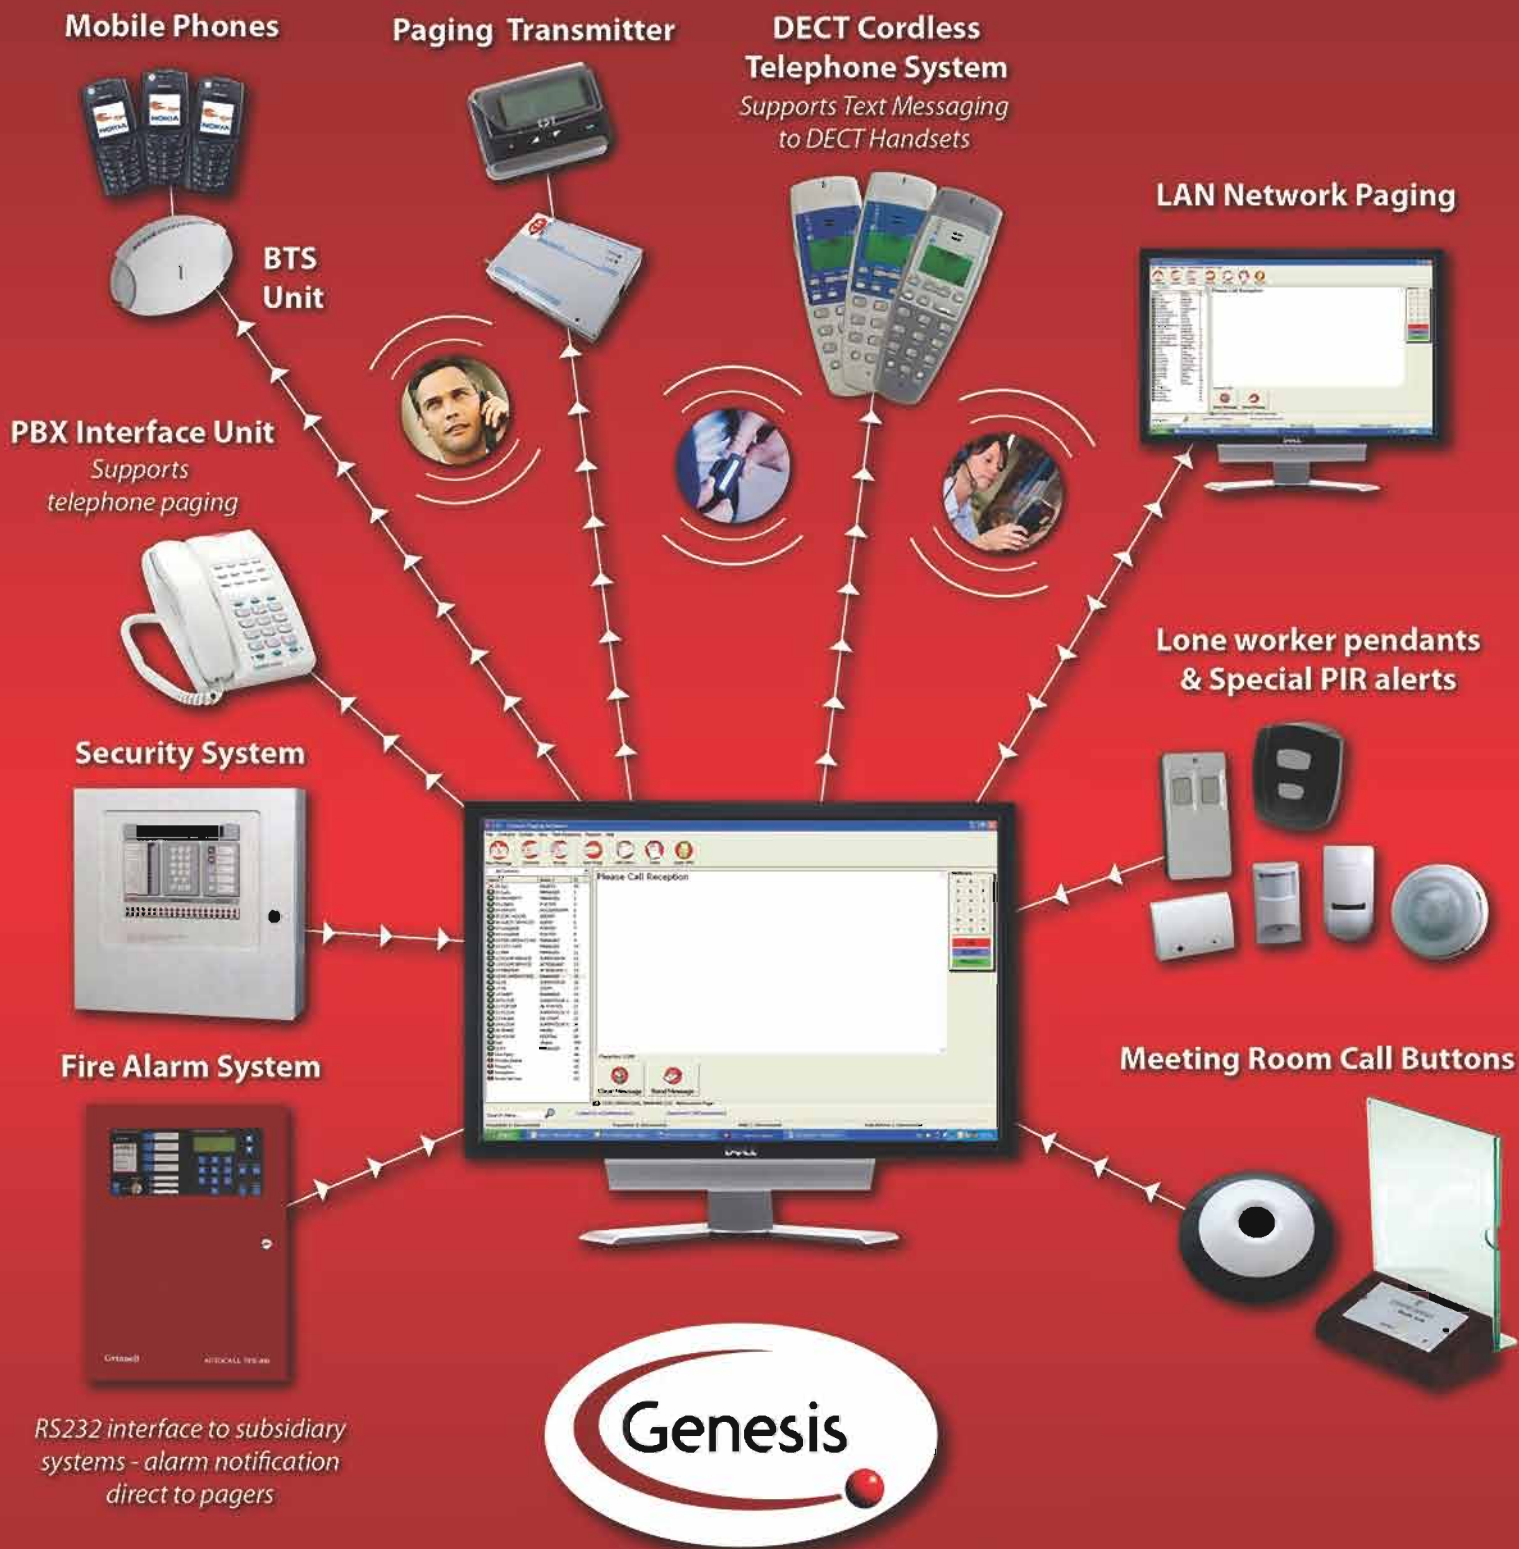

Conference & Meeting Room Buttons

Flexible and discreet, service teams are free to multi-task safe in the knowledge they will be alerted instantly to the specific location calling and the service required. Positioned unobtrusively on a table or fitted to a wall, ServiceCall™ is a unique dedicated communication system designed for the service industry. At the touch of a button, ServiceCall™ will improve response times and staff efficiency with increased customer satisfaction.
