

Raise the standard of hospital hygiene

Patients and Staff Protected by Powerful New Anti-Bacterial, Anti-Viral Technology

MediCall™ Pagers coated with TouchClean® kill all germs, fungi and viruses on contact, protecting users from cross-contamination and infection.

CST MediCall pagers already enhance the 'hospital experience' for many thousands of patients and staff.

Given a pager, outpatients are free to leave the waiting area and visit the cafeteria and other hospital amenities, secure in the knowledge that they will still retain their place in the 'queue'. By eliminating crowded waiting areas, staff are able to work in a stress-free environment enabling them to offer faster and better care to patients.

When patients' appointments are due they can be paged back discreetly with the touch of a button.

MediCall Boomerang™ Pager

Improve efficiency and throughput

Silent, affordable and easy to use, with immediate discreet alerts, MediCall's wireless technology ensures efficient and personal communication between staff, patients and visitors.

MediCall pagers are used extensively throughout Admissions, A&E departments, Same-day Surgery, Outpatient, Phlebotomy and Pathology clinics and Pharmacies.

“With MediCall, my team saves around 140 minutes every day not searching the corridors. The waiting area is also more pleasant for patients and staff without continuous loud announcements”

Recep Suleyman, Imaging Services Manager, Whittington Hospital, North London

Unique Features of the MediCall™ Paging System

- ✓ Vibration, Tone and Flash Alerts are standard
 - ✓ Superior pager battery efficiency
 - ✓ Unique auto renumbering
 - ✓ Enhanced signal coverage + ‘out of range’ feature
 - ✓ Tested to EN13697:2001 and IP54 rated
- Stackable horizontally or vertically.
- ‘Speedy’ charging rack ensures that pagers can be in almost constant use.
- The powerful transmitter gives excellent coverage over a wide area and allows ‘over the air’ pager programming such as renumbering pagers, volume setting and alerts or reminders.

TouchClean® is a photocatalytic coating that destroys organic compounds on treated surfaces, successfully eliminating MRSA, C. Difficile, E.Coli, SARS and Listeria that might otherwise be carried on normal untreated pagers. It also dispels odours, smoke and other pollutants, keeping the pagers clean.

“MediCall is really compact, the transmitter base is small and doesn’t obstruct the reception desk”
