

ALERT Systems™ IP 3000

– Wireless scalable VoIP-solution for businesses with specific needs.

In today's businesses, workers are on the move more than ever. The need to be mobile and connected with the workplace is vital. It is of great importance to remain mobile and secure in today's fast-changing environment and in case anything should happen.

ALERT Systems™ IP 3000 is a scalable solution capable of registering up to 1500 wireless users. In a simple way CST brings mobility to small, medium and large business within a wide range of markets. ALERT System™ IP 3000 solution is a solution based on DECT standard. It has exceptional voice quality and seamless handover between base stations and repeaters. The IP interface to the PBX makes it an ideal solution for business with several locations.

UNIQUE FEATURES – ALERT Systems™ IP 3000

- MSF – alarm and messaging service. The hand units can handle text messages, alarms and voice calls simultaneously. Thereby offering functionality and capacity for "freedom" and considerably streamlining your internal communication.
- Personal alarm – The hand units provide added security for workers that may require help in various circumstances. A simple press on the alarm key will transmit an alarm to colleagues that are close by.
- Positioning – Personnel receiving the personal alarm are given information on the location.
- Flexible and secure communication – The system can be connected to most alarm systems, e.g. fire alarms, property alarms, hospital systems and other monitoring systems for information directly to the hand unit.

ALERT Systems™ IP 3000

– A range of possibilities

We give our customer new possibilities to build telephony solutions with unique features. The advantages with ALERT Systems™ IP are many, both in economic and in practical view. Large savings with technique that is build on acknowledged standards, coordination of tele communication and data net, low costs for operation and support and improved customer services.

– Full scalability in IP

As the ALERT Systems™ IP 3000 is a scalable solution, capable of registering up to 1500 wireless users, it is an excellent choice for small to large business within a wide range of market segments. With a option to deploy the IP 3000 solution as either a single-cell or a multi-cell solution, it can easaly adjusted to fit the needs of the individual customer. The IP interface to the PBX makes IP 3000 an ideal solution for businesses with several locations. A multi-site solution can be customized with a number of single-cell and multi-cell deployments depending on the size of each location.

Up to 256 radio units can be applied to obtain radio coverage. ALERT Systems™ IP 3000 is installed directly on the LAN and must be managed as a part of the corporate network.
